

**Hydrogen Fuel Cells present the highest possible efficiency rating in Backup power equipment.**

- They are the best alternative to Diesel generators, batteries, solar panels or turbines for your backup power requirements
- The maintenance of Fuel Cells is minimal and therefore on-going costs are reduced by up to 75%
- They are designed for mission critical readiness

**What is a Hydrogen Fuel Cell?**

- Very simply, a Hydrogen Fuel Cell converts Hydrogen cells and pure water into consistent Power that is channelled directly to the Load Source
- They will sit without a sound and without any cost in suspended hibernation until they are required
- They come in different power sizes starting from 2.5kW
- They have a very small foot print compared to current backup power sources
- They are completely green with a small amount of pure water being the only emission and minimal noise emissions due to no combustion of fuel and no moving parts.

**Benefits and Advantages?**

- Greatly reduced cost over time
- A turn-key solution requiring less management and maintenance
- Quiet, Small & Neat, Green & Clean – reduce your carbon footprint
- Remote Access monitoring

If you would like to know more about how Hydrogen Fuel Cells will change your view of the best source of back-up power available, please contact John Iacovangelo on +61 3 9328 3699.
